We thought we had a deal. In fact, we did have a deal.

In 2021 CSPA sued AT&T after 8 miles of defunct lead cables owned by the company were discovered in Lake Tahoe.

In November 2021 AT&T settled by agreeing to begin work on removing the lead-lined cables from Lake Tahoe by the fall of 2023.

In July 2023 AT&T pulled the plug on our agreement.

So CSPA is taking on AT&T in court. AT&T is likely to argue that 63 tons of lead in Lake Tahoe does no harm and that it's better not to disturb the cables.

Do you love Lake Tahoe for its historically
pristine waters?

pristine waters?

Don't think it's right for AT&T to let
sleeping cables on Tahoe's lakebed lie?

Please consider making a contribution to
the Rose Foundation's special litigation
fund.

This fund goes exclusively to support
litigation costs for CSPA's court case
against AT&T. Go to [https://rosefdn.org/
donate-project](https://rosefdn.org/donate-project) select: "Get the Lead out
of our Lake Fund."

If CSPA is successful in court, the money
will be returned and roll into a dedicated
fund to protect water quality in California.
